PROFESSIONAL SUMMARY

UI/UX design student (B.Des., Symbiosis Institute of Design, graduating May 2027), available for a 5-month internship from January 2027. At Tech Mahindra, designed **40 dashboard screens and 10 heat maps** for a B2B sustainability product and worked daily with developers and PMs to handoff. I go to users where they work, trace the root cause of their problems and set measurable targets.

WORK EXPERIENCE

UI/UX Design Intern, Tech Mahindra, Pune, India May 2026 – Jul 2026

- **Enterprise dashboard UI:** Designed 20 screens in each of light and dark mode (**40 in total**) plus **10 heat maps** for a client-facing B2B sustainability product, from mood board through low-, mid- and high-fidelity to a Figma prototype.
- **Design system & accessibility:** Built reusable components, variants and shared colour and text styles in Figma, and checked colour contrast in both themes.
- **Cross-functional collaboration & handoff:** Worked daily with developers and PMs, refining screens through repeated feedback rounds into a development-ready handoff; the UI is set to be **published on the client's website**.

SELECTED PROJECTS

Breathe Safe: Chronic Asthma Management App Dec 2025 – Feb 2026

- **User research:** Ran 6 stakeholder interviews (patients, doctors, caregivers, a physiotherapist), a 12-person survey and a field observation; **11 of 12** said in-the-moment activity guidance would be very or extremely useful.
- **Root cause & journey mapping:** Mapped the user journey and used 5 Whys and a 7-app audit to find the root cause (no tool guides safe activity in the moment); defined task flows and IA so each core task takes 4 to 5 taps.
- **Usability testing & metrics:** Tested the Figma prototype with 5 people using think-aloud, eye-tracking and SUS (**average 86.5**); found 12 issues and set round-two success metrics, each with a baseline and target.

Rethinking the Thela: Street Vendor Cart Redesign (team of 2) Mar 2026

- **Contextual inquiry & root cause:** With a teammate, interviewed and observed 6 street vendors at their carts in Pune, then used affinity mapping and a fishbone diagram to trace most of their physical strain to steering and stopping.
- **Designing within constraints:** Built the 3D concept in SketchUp and D5 Render from parts a local mechanic can fit (est. **₹5,000–6,000**), with checks for effort to push and turn, stopping on a slope and build cost.

Resham Riwayat: Banarasi Silk E-commerce Prototype Jun 2025 – Oct 2025

- **Field research & stakeholder mapping:** Interviewed a Varanasi workshop's owner, manager and an artisan, documented the 21-step weaving process and mapped every stakeholder a saree passes through.
- **Information architecture & interaction design:** Defined task flows and IA so a buyer can see who wove a saree in 3 screens; designed a desktop storefront to a high-fidelity prototype.

SKILLS & TOOLS

UX research: User-centred design, interviews, contextual inquiry, field observation, surveys, affinity and journey mapping, root-cause analysis (5 Whys, fishbone), usability testing (SUS, think-aloud, eye-tracking)

Design: Information architecture, interaction design, wireframing and prototyping, visual design, design systems, dashboards and data visualisation, colour contrast checks

Tools & code: Figma, Adobe Creative Cloud (Photoshop, Illustrator), Adobe XD, Lovable (AI prototyping); basic HTML, CSS, Java and Python

LEADERSHIP & VOLUNTEERING

International Buddy, Chiba University Global Buddy Program Aug 2023

- Buddy to Chiba University students during their E-Study India Program; awarded a Certificate of Appreciation by Symbiosis Centre for International Education.

EDUCATION & CERTIFICATIONS

B.Des. in UI/UX Design, Symbiosis Institute of Design, Pune | SGPA 8.23 / 10 Aug 2023 – May 2027 (expected)

Google UX Design Professional Certificate (Coursera) | Published author and cover artist, *Golden Sun* anthology (2023)
